

ENVIRONMENTAL SERVICES | Site Investigation & Closure

GROUNDWATER MONITORING

Whether you are a property owner dealing with an existing environmental release or a prospective buyer conducting due diligence on a property transaction, quality site investigation and closure services are necessary to effectively manage risk and liability.

Soil and groundwater contamination can result from releases at various types of facilities including gas stations, dry cleaners, and a variety of commercial/industrial operations.

Experience and Expertise

Terracon's site investigation and closure services are designed to evaluate whether a release has occurred and, if so, the extent and magnitude of the contamination. With this information, we provide options for timely, cost-effective solutions that are tailored to your objectives.

We have extensive expertise in a broad range of sectors, including: oil and gas exploration/production, commercial-retail, energy, solid waste, industrial, federal, and Brownfields.

UNDERGROUND STORAGE TANK REMOVAL

Terracon's nationwide network of environmental engineers and scientists are experts in the federal, state, and local regulations that govern these services.

Wherever the project location, our site investigation and closure team has the expertise to effectively utilize applicable regulations to provide the most cost-effective and appropriate solutions for the environmental challenges at hand.

We specialize in Risk-Based Corrective Action, a process that draws upon existing site information and the calculation of site-specific cleanup levels to prevent or reduce the need for costly remediation activities.

At Terracon, we utilize our collective resources to provide innovative and economic solutions. We are a multi-service firm that also specializes in geotechnical, materials, and facilities engineering and consulting, which allows us to provide integrated solutions that accomplish multiple project goals while maximizing cost savings.

Our site investigation and closure services include:

- Soil and Groundwater Investigation
- Surface Water and Sediment Investigation
- Soil Gas Investigation
- Vapor Intrusion Evaluation
- Aquifer Characterization and Classification
- Risk-Based Corrective Action
- Fate and Transport Modeling
- Underground Storage Tank (UST) Removals
- Landfill and Methane Investigation
- Brownfields Assessments
- Voluntary Cleanup Program Closures
- Corrective Action Closures

WHY TERRACON?

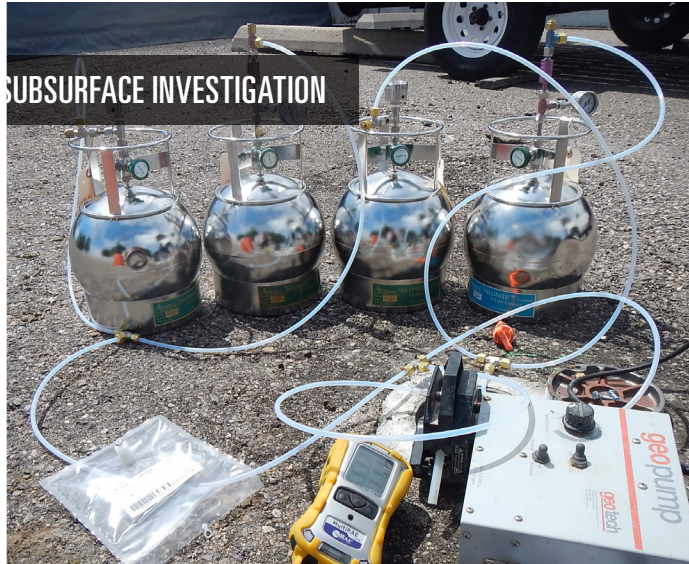

Resourceful. We utilize our nationwide network of environmental engineers, geologists, and scientists to deliver innovative, site-specific solutions tailored to your objectives.

Responsive. Terracon acts quickly to deliver practical solutions that protect the environment, manage risk, and help you achieve your goals.

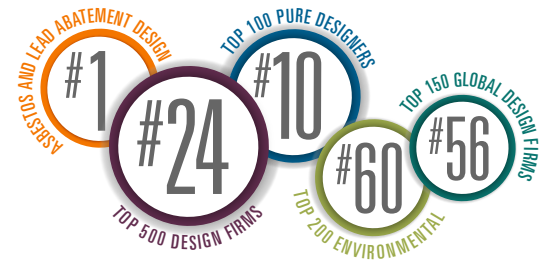

Reliable. We deliver consistent quality through our collaborative approach and ability to share resources and information nationwide.

"I can say that it has been a great experience working with Terracon and I would gladly work with them again."
