

**Know your Risk.
Take Control.
Work with the Experts.**

Our qualified staff includes industrial hygienists, asbestos and lead paint specialists, biologists, engineers, and environmental scientists.

Our staff maintains professional certifications including Certified Hazardous Materials Managers (CHMMs), Certified Industrial Hygienists (CIHs), Professional Engineers (PEs), and Licensed Asbestos (Inspectors, Management Planners, Project Designers, Contractor Supervisors), and Lead Inspectors and Risk Assessors.

INDUSTRIAL HYGIENE SERVICES: Asbestos, Lead, Mold and Hazardous Materials

PM Environmental, Inc. (PM) is a full service environmental risk management firm that creates value for our clients by assessing and proactively managing a wide variety of facility related environmental concerns commonly encountered in industrial, institutional, commercial and residential building environments.

PM is experienced in comprehensive inspections and preparing bid specifications, removal scopes of work and remediation work plans, as well as providing oversight and air monitoring throughout the duration of a project.

SERVICES:

- Comprehensive asbestos, lead paint and hazardous materials management programs for renovation and demolition projects, including surveys in residential, industrial, commercial, institutional and municipal buildings
- Lead-based paint inspections using our X-Ray Fluorescence (XRF) analyzers and risk assessments for public housing and child occupied facilities, including lead paint inspections in support of the EPA Renovation, Repair, and Painting (RRP) Rule.
- Mold and Moisture Assessments
- Total project management including the preparation of bidding specifications, management of the bidding process, oversight of removal activities, third-party and worker exposure air monitoring, and documentation of compliance with project specifications and local, state and federal regulations
- Development of management processes based on PM's industry experience and best management practices
- Management of facility decommissioning projects involving the removal of asbestos containing materials, industrial wastes and regulated building wastes
- Project planning and coordination across interdisciplinary project teams.
- Monitoring for compliance with current state and federal regulations
